

ROLL CAP AND ROLL SEAM ROOF AND WALL ARCHITECTURAL EUROPEAN-STYLE METAL TRAY CLADDING

PURPOSE

Roll Cap Roof and Wall and Roll Seam Roof and Wall Architectural European-Style Metal Tray Cladding (Roll Cap and Roll Seam Metal Tray Cladding) is supplied by MDS for use in external roof and wall cladding systems.

EXPLANATION

Roll Cap and Roll Seam Metal Tray Cladding features metal tray profiles for long runs, with wide pan trays and wide caps manufactured from 0.55 BMT pre-painted steel, 0.7 mm Zinc and 0.9 BMT aluminium, 0.6 BMT copper or 0.7 BMT zinc. The Roll Cap profile has a distinctive wide cap, and the Roll Seam profile has a distinctive seam flashing.

Standard sizes are:

- Coil width 500 mm with a roll cap of 460 mm
- Coil width 610 mm with a roll cap of 570 mm.
- Coil width 600 mm with a roll cap of 560 mm

Custom sizes are available.

The profiles lock together at the cap and are fixed to a plywood substrate with hidden clips.

SCOPE AND LIMITATIONS OF USE

Scope	Limitations
Location In wind zones up to and including Extra High as defined in NZS 3604:2011 or a maximum wind design pressure (ULS) of 2.1 kPa. In all exposure zones as defined in NZS 3604:2011. On buildings located any proximity to a relevant boundary.	<ul style="list-style-type: none"> ➤ Fixing spacings must be calculated in accordance with section 3.9 of the NZ Metal Roofing Manufacturers (NZMRM) Code of Practice, version 23.09 or specifically designed. ➤ Where microclimatic conditions apply (section 4.2.4, NZS 3604:2011), contact MDS for technical advice. ➤ In exposure zone D, steel must not be used. ➤ The design of the other external envelope elements must comply with the relevant fire provisions of the NZ Building Code.
Building In conjunction with a primary structure (timber or steel structural framing, or over structural panels) that complies with the NZ Building Code or where the designer has established that the existing structure is suitable for the intended building work. As a roof cladding. As an external wall cladding.	<ul style="list-style-type: none"> ➤ A thermal break is required where installed over steel framing. ➤ Minimum roof pitch must be 3°. ➤ A substrate of minimum 15 mm plywood with a building wrap must be installed. ➤ Flashings, flexible building underlays, and fixings must be in accordance with E2/AS1 and/or the Code of Practice, version 23.09. ➤ Contact with other materials must be in accordance with E2/AS1 and the NZMRM Code of Practice, version 23.09. ➤ Must be installed over a drained and ventilated cavity. ➤ A substrate of minimum 15 mm plywood with a building wrap must be installed. ➤ Where the cladding is installed vertically, castellated cavity battens are required. ➤ Flashings, flexible and rigid building underlays, and fixings must be in accordance with E2/AS1 and/or the NZMRM Code of Practice, version 23.09. ➤ Contact with other materials must be in accordance with E2/AS1 and the NZMRM Code of Practice, version 23.09. ➤ Where the building has a building height greater than 10 m and upper floors contain sleeping uses or other property, then the external wall must be subject to specific fire engineering design in respect of vertical spread of flame.
